Taiyuan Iron and Steel (Group) Co. Ltd. (TISCO) is one of the steel giants in China and, the largest stainless producer in the world in term of output and sales equipped with the most advanced facilities covering pretty wide product range. After over 70 years development TISCO has the capacity of 10 million tons of steel, which includes 3 million tons of stainless. The year of 2009 saw TISCO become No.1 stainless producer in the world with production of 2.48 million tons of stainless.

In TISCO came out the first heat of stainless steel and first heat of silicon steel as well as the first sheet of silicon in the history of China steel industry. TISCO is well equipped for mining and iron ore refining, iron and steel making, rolling and forging, metallurgical equipment and spare parts manufacturing. TISCO's products cover stainless steel of cold and hot rolling, cold rolled silicon, hot rolled coil, axle steel, die steel and steel for military purpose etc. TISCO's products are widely used in petrochemical industry, transportation, construction decoration, home appliance, medical and food industry. TISCO's products can be also found in the national key projects such as Shenzhou spaceship, Chang'e-1 Moon Detector, Dongfeng rocket series and nuclear power, Three Gorges, West-East natural gas transmission, and Olympic game facility as well as Shanghai world expos. In 2009 TISCO technology centre ranked No.2 among the 575 state acknowledged enterprise technology institutions, and No.1 among the steel industry. TISCO owns 745 core patents in the field of stainless and over 100 patents are taken as the world class.

TISCO is aiming to become the most competitive stainless producer in the world, and achieve the first class stainless product in terms of product range, quality, cost, R&D, energy saving, environment protection, efficiency and service. For this goal TISCO is trying the first world class level and build itself into the world competitive large group company.

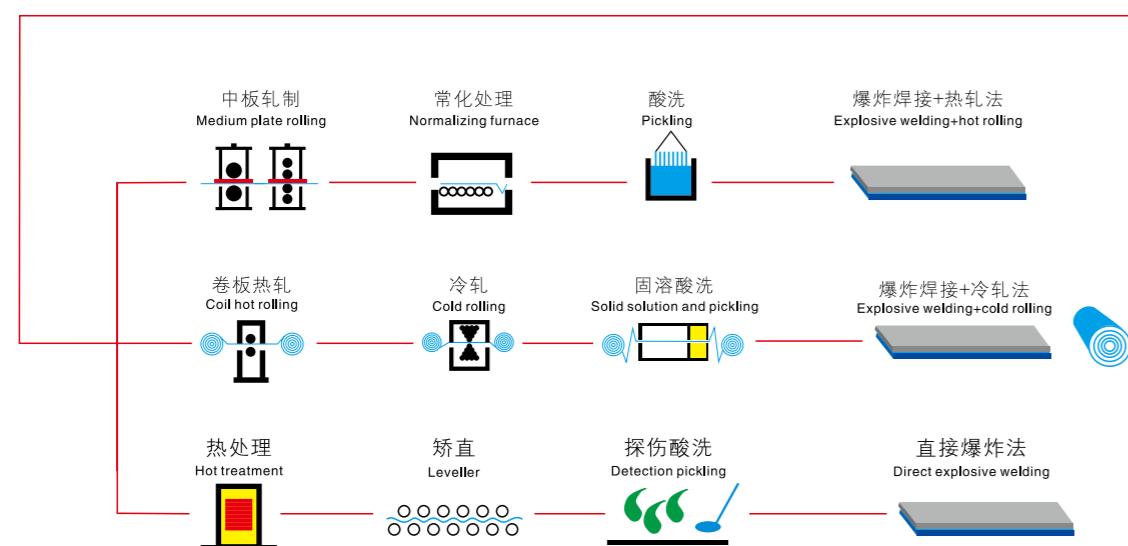

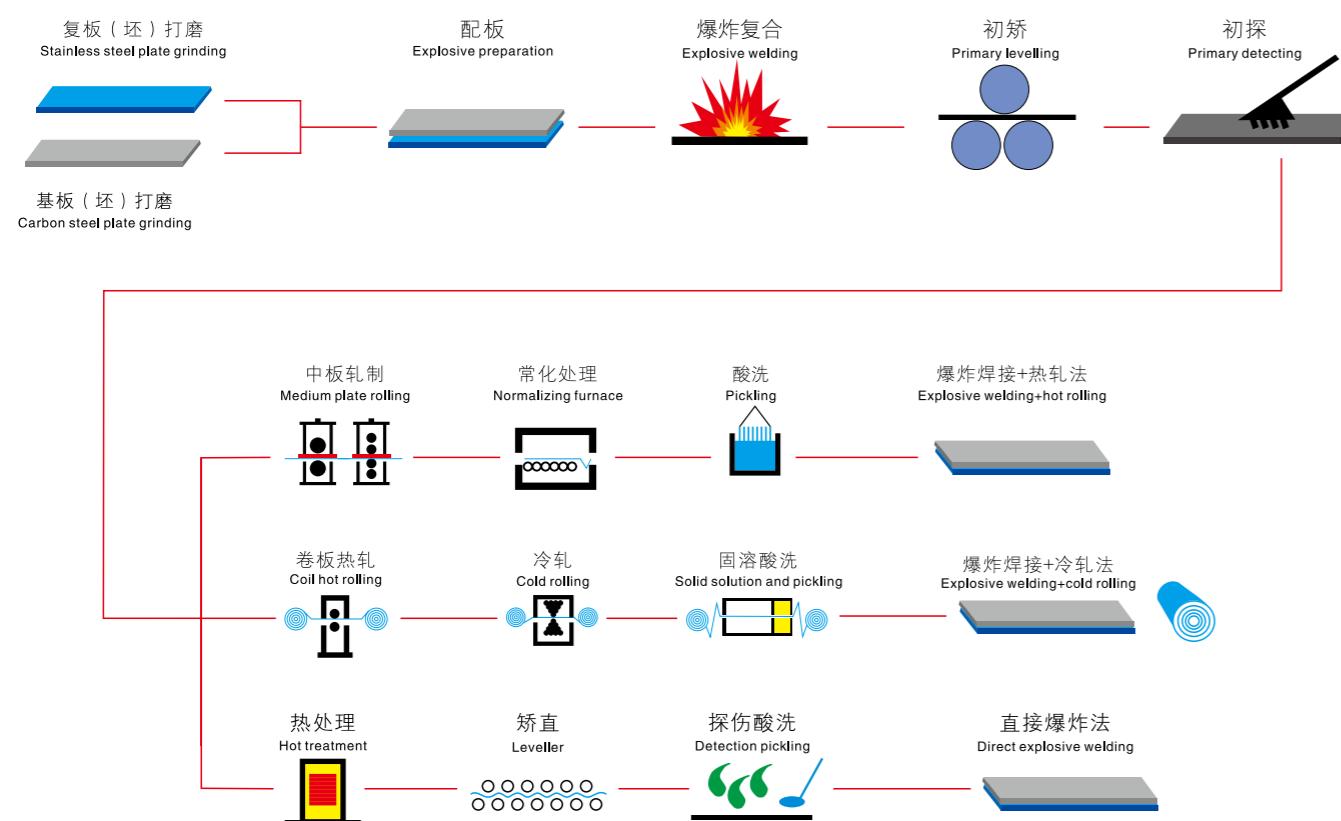

Taigang Clad Material Plant is a main producer of clad metal material at present with the large scale production, most complete equipment and most advanced process. It can produce 30,000 tons metal clad plate yearly. Clad metal material is one of strategic products of TISCO. And the main products are “stainless steel–steel” clad material with other nonferrous clad material such as copper, aluminum, titanium, nickel etc.

The metal clad plate bonded through explosive welding and rolling is a new type of material with the advantages of various material, which enable expensive metal saving and reduction of production cost. This allows wide application in petroleum, chemical industry, water conservancy, salt refining and building decoration. Up to now, the plant has supplied a great deal of clad metal material to many domestic major projects, such as Three Gorges Project of Yangtze River, Wanzhou Vacuum Salt Refining Project of Chongqing, Qingdao large scale petroleum project, Fujian large scale petroleum project, Huizhou large scale petroleum project, Guangxi large scale petroleum project and Guangzhou Subway Clad aluminum etc. it also supplied metal clad material for overseas projects. It gains good evaluation from these customers.

Stainless steel clad plate has many types, various dimensions, an area of 30m² of one piece plate, 100% cladding with one explosion. Perfect quality system control, rich technology strength, integrated equipment ensure the Taigang Clad Metal Material Plant developed rapidly. The scale production of dual-sides stainless steel cold roller sheet (strip) and the complication of the stainless steel clad plate standard filled the blank in China, while satisfied the demands of architecture decoration, petroleum and chemical industry and made the development of stainless steel clad material stepped up to a new stage.

焊接要点

Welding Notes

- 复层焊接为保证焊接质量，要用小直径焊条多道焊，对焊层的堆焊高度要控制最小；
- 复层焊接时必须彻底清除过渡层溶渣及其他表面附着物，层间温度控制在60℃以下；
- 要注意引弧和熄弧的质量，收弧应将弧坑填满，多层次焊时的层间接头应错开；
- 焊基层第1层时，需特别注意不得将低合金金属沉积到复层上；
- 过渡层熔敷金属必须盖满钢层1.5-2.5mm，并盖过不锈钢与碳钢交界面0.5-1.5mm；
- 过渡层第1遍焊接要采用小参数、反极性、直道多道焊，降低对复层的稀释。

To guarantee the welding quality of cladding, smaller diameter welding rod should be applied by multi-layer of welding seam, while the seam height should be kept minimum.

Welding on cladding, the flux and other surface attachment must be removed, the interlayer temperature shall be controlled under 60℃. More notice shall be taken on welding start and stop. The end of welding should fill up the welding pit, multi-layer welding seams should be staggered.

While welding the first layer on bottom plate, special attention should be taken to avoid low alloy metal settled on cladding. 1.5-2.5mm of transition layer melting metal must be paved along the plate, while surpassing the interface by 0.5-1.5mm between stainless steel and carbon steel.

The first welding seam of transition layer should adopt smaller parameters, anti-polarity, straight and multi-welding seams to reduce the dilution to cladding.
